Classification:

Product Functionality for I-7000/M-7000 series

Question

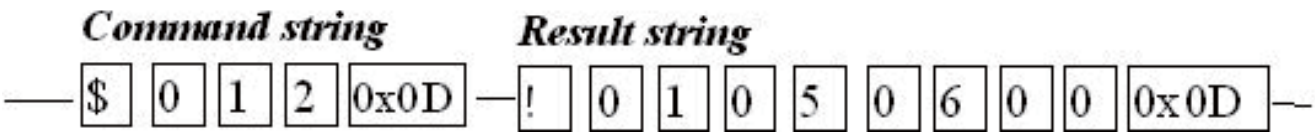

What's the syntax of the command string?

Answer

The syntax of command string is shown as following:

[leading char][address][data][checksum][0x0D]

[leading char] = $ or % or # or @ or ~
[address] = 00 to FF à 256 different module address max.
[data] = command code and the related data if needed
[checksum = two chars if checksum enable
= no char if checksum disable
[0x0D] = ASCII code 0x0d, the command string terminator
