Q : Does the VxComm Driver(PC) support auto-reconnection after fixing a network break ?

Ans : Yes, the VxComm Driver(PC) supports the auto-reconnection mechanism after version 2.00.

The VxComm Utility allows user to set the server-options that include Keep-Alive Time(ms) and Connection-Broken time(ms). Please refer to the "Adding a 7188E/8000E server and configuring the VxComm Driver" section of the VxComm Driver online help file (VxComm.Chm).
