1 Connecting the Power and Host PC

1) **Make sure your PC has workable network settings.**
   Disable or well configure your Windows firewall and Anti-Virus firewall first, else the **"Search Servers"** on **Chapter 3** may not work. (Please contact with your system Administrator)
2) **Connect both the (P)ET-2251 and your PC to the same sub network or the same Ethernet switch.**
3) **Supply power** (PoE or +10 to +48 VDC) **to the (P)ET-2251.**。

⚠ **Note: Please use the first RJ-45 jack (ETH1) to connect the PoE Switch for powering through PoE.The second RJ-45 jack (ETH2) doesn't support the PoE function.**

3 Configuring Network Setting

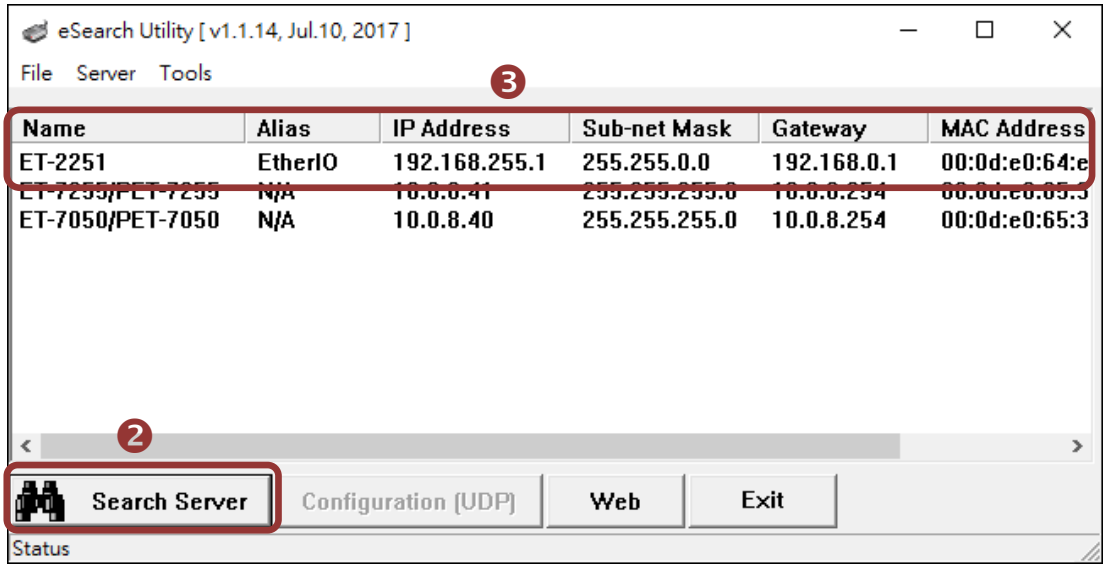

1) Run the eSearch Utility.

eSearch Utility download link:

https://www.icpdas.com/en/download/index.php?nation=US&kind1=&model=&kw=esearch

2) Click the **"Search Servers"** to search your (P)ET-2251.

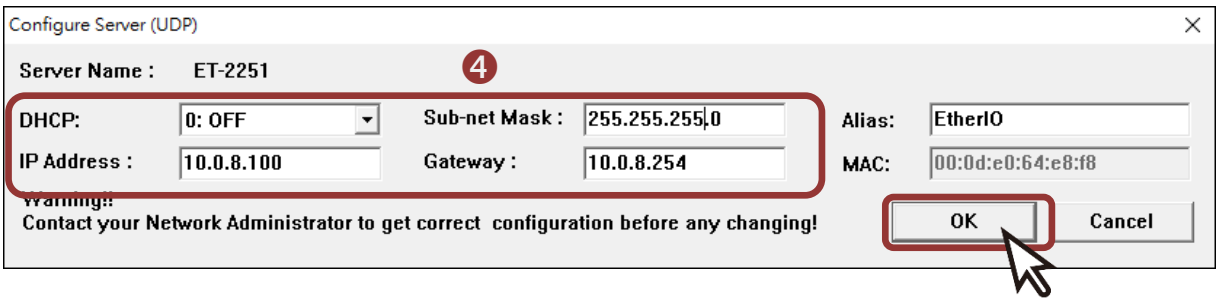

3) Double-click your (P)ET-2251 to configure the settings.

Factory Default Settings of (P)ET-2251:

IP Address	192.168.255.1
Subnet Mask	255.255.0.0
Gateway	192.168.0.1

4) Contact your Network Administrator to obtain a correct network configuration (such as **IP/Mask/Gateway**). **Enter the network settings** and click **"OK"**. ⚠ **Note: The (P)ET-2251 will use the new settings 2 seconds later.**
